

The Life Sciences Talent Bank Company

SENIOR ENGINEER, MANUFACTURING

SENIOR ENGINEER, MANUFACTURING

This position is responsible for the technical support of the manufacturing operations in a public biopharmaceutical company in **Central New Jersey**. This position will report to the Director or Associate Director in Manufacturing Technology and will interact with engineering, manufacturing, validation, quality assurance, quality control and regulatory departments. Interaction may be required with contract producers of the Company's products. Knowledge of cell culture, purification and support systems used in the manufacturing of biotech products is essential. Database experience a plus.

DUTIES AND RESPONSIBILITIES

Responsible for supporting manufacturing operations through the performance of the following duties:

Tracks trends and analyzes production data.

Troubleshoots issues in conjunction with manufacturing staff. Communicate issues in a timely manner.

Assists in the transfer of processes and process improvements from process development to the production facility and from one production facility to another.

Authors technical reports supporting technology transfers, deviation/adverse event reporting and process analysis/trending.

Ensures cGMP compliance.

Works with validation to support the start-up of new facilities and validation of existing facilities.

As required, assists in the planning and execution of process validation activities. May be asked to support additional projects in Manufacturing Support & Process Validation group.

ESSENTIAL KNOWLEDGE, SKILLS, EXPERIENCE

B.S. degree in Chemical Engineering, Microbiology, Biochemistry or Chemistry.

A minimum of 7 years relevant experience in a GMP production/development environment.

Demonstration of superior performance as a Manufacturing Engineer III or an equivalent position.

Previous supervisory experience of 1-2 years.

Experience in fermentation and/or protein purification manufacturing.

Process and equipment knowledge of cell culture and purification functions.

Thorough understanding of GMP requirements for a large scale manufacturing facility.

Process validation experience a plus.

Excellent communication skills, both oral and written.
